HP MFP S975dn
Blue Angel User Information RAL-UZ 171

The HP laser printing device HP MFP S975dn is awarded the environmental label Blue Angel (RAL-UZ 171, edition July 2012) for meeting altogether more than 100 strict certification criteria. In the following, essential environmental information on the device is summarised. Comprehensive information on the Blue Angel product requirements and detailed product specifications are available at www.blauer-engel.de.

**Printing paper**
This device is suitable for using recycled paper in accordance with EN 12281.

**Double sided printing/copying**
The device is equipped with an automatic duplexer for double-sided printing/copying.

**Guarantee of repairs**
Spare parts for the repair of this device model are still available at least five years after end of production.

**Information on maintenance of equipment**
- Cleaning, maintenance and disposal should only be performed by experts in accordance with the instructions in the product documentation.
- The device is equipped with an ozone and a dust filter which can only be replaced by experts.

**Return of equipment**
HP offers customers in Germany the opportunity to return used equipment. Information on the return of equipment is available at your local HP sales or customer-service centre.

**Return of photoconductor drum**
The photoconductor drums should only be replaced by experts.

**Return of consumables**
In Germany and many other countries, laser print cartridges for this device can be returned to HP as part of the return and recycling programme. Visit our website: www.hp.com/recycle. For all environmental inquiries about HP printing products and supplies, please start with environment@hp.com.

**Information on handling of the toner modules**
- Please leave the print cartridge in its despatch packaging until you need it for use in your printer; when inserting the print cartridge, please follow the information on handling.
- Print cartridges should never be opened by force. If toner dust escapes, e.g. as a result of inappropriate handling, inhalation of dust and skin contact are to be avoided as a precautionary measure.
- In case of skin contact wash affected areas thoroughly with soap and cold water. Print cartridges are to be kept out of the reach of children.
**Air emissions**

With original toners the device passes the air emission test for monochrome printing according to RAL-UZ 171. Since plastics of new electrical devices generally release small amounts of volatile substances into the room air, we recommend providing sufficient air exchange in rooms where new devices are set up.

**Noise emissions**

Declared sound power level for copying ($L_{WAd}$)

In Fastest (loudest) monochrome copy mode: 7.29 Bels and 72.9 dB

Office equipment with a declared sound power level $L_{WAd} > 63.0$ dB is not suitable for use in rooms predominantly used for intellectual activities. Because of their high sound emission they should be set up in separate rooms.

**Energy**

Energy information on HP MFP S975dn

The consumption of electric power depends on its properties and on the way it is used. HP MFP S975dn is designed and pre-set in a way to allow you to reduce electricity costs.

Directly after the last print or copy job, HP MFP S975dn switches over to an electric power saving mode. If the device switches over to electric power saving modes, you can save electricity and operating costs. If the device is to print or copy again, there can be a short delay – this is called return time. However, the device meets the strict Blue Angel requirements for a return time (http://www.blauer-angel.de).

You can save electricity costs by shortening the device’s activation times as it will switch over to an electric power saving mode more quickly. If you extend the activation time or deactivate the electric power saving mode, you should consider that consequently, the device will consume more electric power and might no longer meet the maximum value for electric power consumption of the Blue Angel. We recommend not extending the activation times.

The device is so designed as to ensure that it can be switched to the Plug-in Off mode by pressing the on/off switch up to twice a day without suffering damage. This device does not have a switch by which it can be completely disconnected from the mains. When after having switched off the device you pull out the power plug, electric power consumption is completely stopped.

The table below lists the individual power consumption values as well as activation and return times (factory setting). With these values the device meets the Blue Angel requirements. The values also apply if the device is connected to a wired data network.
Overview of HP MFP S975dn operating modes

Page throughput for A4 paper size (according to continuous printing method):

In monochrome print mode: 75 pages/minute

Maximum power consumption (at switch on): 1840 watts

1 After the last print or copy job, the device switches over to electric power saving modes in several steps. By and by, electric power consumption is reduced in these modes. The device will switch over to the Ready mode first. After the activation times stated above, the device switches over to Sleep 1 mode and then to Sleep 2 mode.

2 Averaged value, measured without accessories

3 Activation time is the time that elapses after the end of the printing or copying process until the device enters the respective mode. The figures in brackets indicate the user-selectable range within which activation times can be adjusted. The activation time values apply to all primary functions of the device: printing, copying.

Energy consumption of HP MFP S975dn

Measured according to the settings stated in the table above, the energy consumption of HP MFP S975dn is 5.602 kilowatt-hours/week (energy consumption at standard use cycle according to ENERGY STAR version 1.1 determined by using the test pattern taken from ISO/IEC 10561:1999).
